

# Test it!

Have somebody (it could be you!) test out what you've made and take some notes about how it goes. If they ask you any questions or need help with something, make a note of that too – this might be where you need to make improvements to your design.

**Person testing:**

**Date:**

**What did they test?**

**What did they think of it overall?**

- It's great, I love it!
- It was OK
- Something needs to change

**What parts worked? What did they like best?**

**How well does your project address your chosen problem? What could you improve about it? Is anything missing or broken? Are there bugs?**

**What will I do next?**

- Re-design something that's not working
- Fix or improve my code
- Start designing a new feature
