

# Idea specification

## What could you make?

Come up with three possible solutions to your chosen problem. Try to draw them using pictures instead of words.

Think big! Be as creative as possible. Even if you think an idea is not brilliant or even realistic, write it down!

1

2

3

If you have more than three ideas, draw them on another sheet of paper!

## How will you make it?

Look at the ideas you wrote down and sketched out, and pick your favourite one. Think about how you might go about making it real.

**My idea will be a:**

**Some things it will do are:**

**What technology  
Will you use?**

- Scratch
- It will be a website
- Hardware such as Raspberry Pi, Arduino, etc.
- Something else:
- Wearable technology
- Python or another programming language

## Some things your project will not do:

Just as important as it is to define what your project will do, is to think about what it will not do. For example, imagine telling people what your project idea is. What might they think your project will do that it actually won't do?
